组合語言與系统程式 期末 project 書面報告 主題: Zombie Hunter

组員:

109502517 洪硅貿

109502555 蔡明翰

109502518 陳洛鈞

组員分工:

▶ 蔡明翰:

程式架構、倒數計時

▶ 洪径貿:

殭屍顏色變化、细節修改

彙整造型與程式碼、計算分數動畫

▶ 陳洛鈞:

設計殭屍造型、開始畫面

倒數計時畫面、遊戲结束畫面

▶ 共同部份:

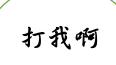

ppt 與書面報告製作

使用函式庫:

Irvine32.inc

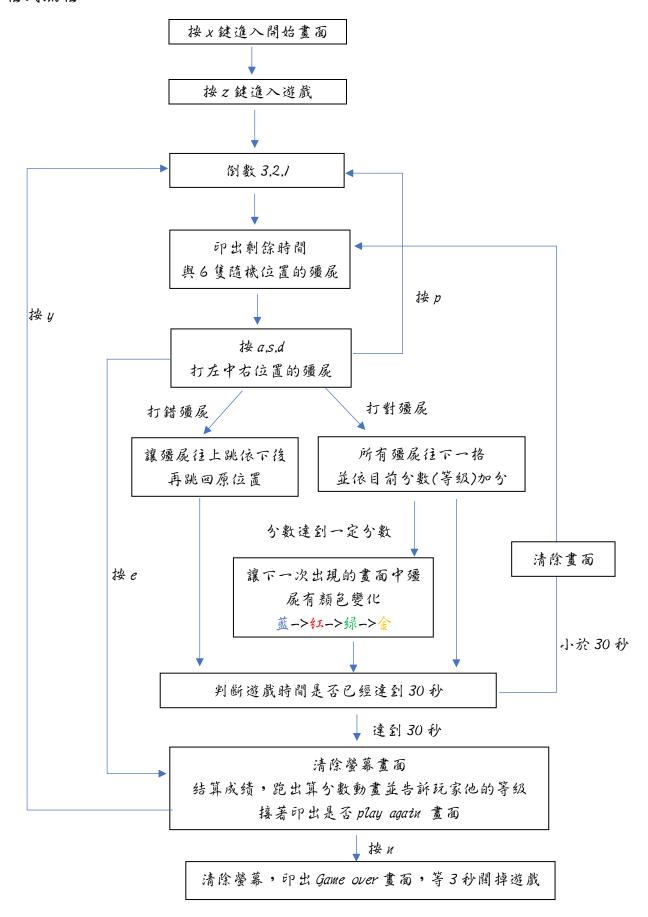

遊戲規則:

- 1. 支按alt+enter進入全營幕,按Z進入遊戲畫面
- 2. 每次遊戲時間爲30秒。
- 3. 過程中以 a.s.d 爲左中右三個按鍵打擊由上往下掉的殭屍。
- 4. 打錯殭屍會跳一下,打對就打下一個殭屍。
- 5. 如果分數達 / 萬多、4萬多、9萬多時,調整殭屍顏色(越高级分數越高)。
- 6. 如果想要结束遊戲,請按e。
- 7. 如果想要重來,請按力。
- 8. 30 秒過後遊戲结束,會自動計算得分。
- 9. 按y可以重新開始遊戲,按 n 會關掉遊戲。

程式流程:

闊於程式的詳细説明:

```
main PROC
                ;则玩家換成全螢幕
first1:
mov dl,0
 mov dh,0
call gotoxy
nov edx. offset beginnes
call writestring
call readchar
cmp al,"x"
jne first1
            ;遊戲聞場及規則
begin:
call clrscr
mov success,0
nov dl,0
nov dh,0
call Gotoxy;游標移動到(0,0)
call crlf
call crlf
call crlf
mov edx, offset ms1
call writestring
call crlf
mov edx, offset ms2
call writestring
call crlf
mov edx, offset ms3 call writestring
call crlf
```

戈顯現字串讓玩家自己開發全營幕後按x鍵進行下一步。

秀出華麗開場以及規則,按Z後開始遊戲(使用 writestring 印出)

```
call crlf
mov edx,offset ms34
call writestring
call crlf
mov edx,offset ms35
call writestring
call crlf
mov edx,offset ms36
call writestring
call crlf
mov edx,offset ms37
call writestring
call crlf
mov eax,1000
call delay
mov eax,42
mov dl,0
mov dh,0
call Gotoxy
L42:
mov edx,offset ms38
call writestring
call crlf
Loop L42
mov dl,0
mov dh,0
call Gotoxy
L42:
mov edx,offset ms38
call writestring
call crlf
Loop L42
mov dl,0
mov dh,0
call Gotoxy
mov ecx,4
LLLLLL:
mov edx,offset ms39
call writestring
```

倒數 321, 印出 3 後, 使用 call delay 将 EAX 輸入 1000, 延遲出現一秒的效果, 2 跟 1 也是依此類推印出。

```
invoke gettickcount
                                                                                                                  L: ; 印出票层
  mov systime,eax
mov dl,0
mov dh,6
                                    ;紀錄開始時間
                                                                                                                    mov eax,3
call randomrange
                                                                                                                   mov randnum, ea

mov edx, offset s2
call writestring
call crlf
  cmp randnum,1
je L2
cmp randnum,2
je L3
```

遊戲開始:

- 1. 寓一個打殭屍正確答案的陣列(使用 call randomrange)
 - a. Call randomrange 輸入變數 3, 代表後隨機後 0~2
 - b. 如果是 O 就跳 L1,1跳 L2,2跳 L3。每個 label 都會印出隨機位置的殭屍
 - c. 每次殭屍印完後,在 aus 陣列輸入需要該按鍵名稱,如左邊就是要打 a, 中間要打 s,右邊要打 d
 - d. L1~3是印出一開始的殭屍, L9~11是印出之後出現在陣列的殭屍。

```
mov eax,16
mov_eax,gray+(black*16)
call settextcolor
mov edx, offset pal
call writestring call crlf
mov edx, offset pa2
call writestring
call crlf
mov edx, offset pa3
call writestring
call crlf
mov edx, offset pa4
call writestring
call crlf
mov edx, offset pa5
call writestring
call crlf
imp hit
```

2. 印出按键 ASD

- 3. 印出剩下的時間(倒數 30 秒)以及 6 隻殭屍(時間是使用 invoke gettickcount 利用一開始的系统時間與現在的系统時間相減相加等運算得出剩餘時間。
 - a. 如果是剩個位數秒,就多印一個 (),讓數字看起來還是兩位數。
 - b. 如果是剩餘兩位數秒,就不用多印 O,

```
mov wronghit,1 ;打錯厘层時
                                                                                                                                                                     L8: ; Ald Files
                                                                                                                                                                      cmp ans[esi],"a"

                                                                                                                                                                     cmp wronghit,l
je LLLL
jmp exit3
                                                                                            jmp L8
 jmp L8
```

- 4. 打錯殭屍時,用 call gotoxy 在上面一小格印出一樣的殭屍 delay 0.3 秒後恢復 原装,就可以製造出殭屍跳一下的效果
 - a. 因爲 settextcolor 的函式會連續印出所有出現在營幕上的文字的顏色,因 此連打錯的時候都要重新判斷要上什麼顏色。
 - b. 我們設一個 jmp L8 讓他跳到 L9~11 其中一個印出看起來往上跳的殭屍, 再用 LLLL 讓他跳到可以 call delay 延遲 300 毫秒的地方。

5. 打對殭屍時,把陣列中正確答案依序往下移一格,再補上一個新答案進去, 再重新印出所有殭屍及倒數時間。

```
yes: ;打正確頒屍時
 cmp success,10120
jb L50p
 cmp success,40529
jb L150p
 cmp success,91345
jb L300p

mov edx,0
  mov ebx,1000
                                                                                            call Gotoxy
  div ebx
cmp eax,30
                                                                                            call delay
   jae reallyexit
  cmp eax,20
ja L12
sub counting,eax
                                                                                            add ebx,1
                                                                                            Loop Looop
                                                                                            mov edx.offset score
mov eax, counting, eax
mov eax, counting
mov counting, 30
call writedec
call crlf
jmp L14
                                                                                            call writestring
                                                                                            mov eax, success
                                                                                            call writedec
                                                                                            call crlf
```

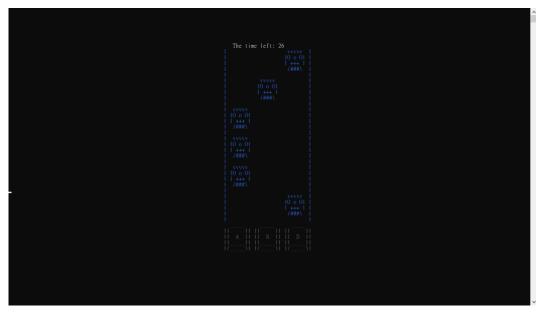

8. 時間到30秒,用jmp reallyexit 跳出去週圈,印出分數以及play again(印出殭屍時,分數由1、2、3、4等等開始加上去,每次印出 delay0.00/秒,就可以製造出分數跳上去的感覺。

```
L13:
call readchar
cmp al,"n";按n结束
je done
cmp al,"y";按重求
je gamestart
jmp L13
done:
call clrscr
mov ecx,11
```

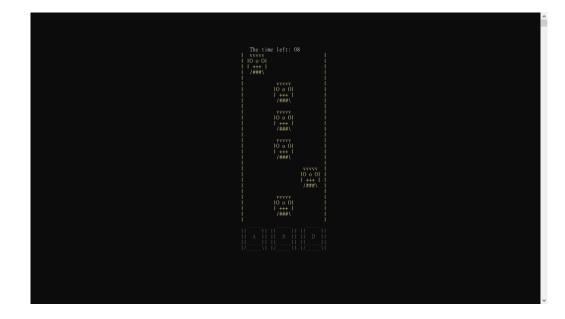

9. readchar 按y重新開始,按u印出game over 然後结束程式。
